

# Class StringFun

java.lang.Object  
StringFun

public class **StringFun**  
extends java.lang.Object

This program demonstrates the usage of the following String functions: s.length() s.equals() s.substring() s.trim() s.indexOf() s.lastIndexOf() s.charAt() The two other string functions I chose to include are s.toUpperCase() and s.replace(). s.toUpperCase() converts the string you included to all uppercase characters. s.replace() requires two characters as a parameter and swaps those characters in the included string.
